# Finishes

## Available finishes for self-clinching fasteners:

Finish	Chromate	Suffix	RoHs
Black Dry Film Lube	-----	ML	Yes
Black Nitrate	-----	BN	Yes
Black Oxide	-----	BO	Yes
Bright Acid Tin	-----	BT	Yes
Cadmium	Black	CB	No
Cadmium	Yellow	CC	No
Cadmium	Clear	CI	No
Cadmium	Dry Film Lube	EF	No
Copper Flash	-----	CF	Yes
Copper, Nickel, Tin	-----	CT	Yes
Dacromet 320	-----	DM	No
Electro Tin	-----	ET	Yes
Electro Tin (Matte Finish)	-----	MT	Yes
Geomet	-----	GM	Yes
LM1293	-----	LM	Yes
Nickel over Copper Flash	-----	NC	Yes
Nickel Plate	-----	NI	Yes
Nylon Locking Patch	-----	NP	Yes
Tin Lead	-----	TL	No
Zinc (*)	Clear	ZI	Yes
Zinc with Sealer (**)	Clear	ZS	Yes
Zinc (***)	Black	ZB	Yes
Zinc (***)	Blue	BZ	Yes
Zinc (***)	Green	ZG	Yes
Zinc (***)	Red	ZR	Yes
Zinc (***)	Yellow	ZC	Yes
None	-----	X	Yes

### Notes:

1. Unless otherwise specified self clinching fasteners will be provided with zinc/clear chromate (ZI).
2. P/N Structure example:  
C632-1 ZC  
                                 └─> Finish
3. In accordance with ANSI B1.1(inch) and ANSI B1.13M(metric) specifications, the maximum major diameter and pitch diameter of class 2A/6g plated studs can be gauged to class 3A/4h.

### Other Finishes available upon request

- \* Zinc with clear trivalent chromate, 5µm thickness on all significant surfaces, withstands 12 hours salt spray to white corrosion. Reference applicable sections – ASTM B633, ASTM F1941, ASTM F1941M & ASTM B117.
- \*\* Zinc with clear trivalent chromate and sealer, 5µm thickness on all significant surfaces, withstands 72 hours salt spray to white corrosion. Reference applicable sections – ASTM B633, ASTM F1941, ASTM F1941M & ASTM B117.
- \*\*\* Zinc with colored trivalent chromate, 5µm thickness on all significant surfaces, withstands 96 hours salt spray to white corrosion. Reference applicable sections – ASTM B633, ASTM F1941, ASTM F1941M & ASTM B117.

### Captive Trade Mark Legend:

To assure you receive genuine **Captive** parts, look for the following trademarks:

-  - STUDS   
  - FLOATING NUT   
 ||||| - CFSP NUTS   
 CF - STEEL & STAINLESS NUTS  
 (Cold Formed)

# Locking Patch

The ND Patch coating process produces a completely dry product that is fused to the fastener and is ready to use right out of the box. ND Patch performs immediately upon assembly with no curing time required.

## How ND Patch Works:

- When assembled with a mating part the resilient ND Patch is compressed. The compressed engineered plastic (typically a Nylon Patch) provides locking action in the thread instead of at the bearing surface due to its vibration dampening characteristics. In general, the resilience of ND Patch holds the fastener in place without adhesives or thread distortion. Due to its resilience, Patch can be repeatedly adjusted and reused.
- ND Patch is normally positioned one to three threads back from the end of the fastener to assure ease of starting. The normal coating length of the Patch is four to six threads. Special Patch location and coating length can be specified for specific applications.

## Features:

**Saves Time:** Fasteners coated with ND Patch can be automatically fed through standard feeding devices.

**Retains Full Strength:** ND Patch process involves no drilling or milling, so there is no loss of the fastener's strength or hardness and any troublesome burrs or chips.

**Saves Money:** Use of ND Patch eliminates the need for costly lock washers, cotter pins, or castellated nuts. You get a close fit without the costs involved in obtaining close tolerances. Moreover, ND Patch is less expensive than applying bottled thread locking compounds at the point of assembly.

**Resists Heat & Cold:** ND Patch meets and exceeds IFI Specifications 124 & 524 as well as Military specification MIL-DTL-18240F, Type P, for temperatures from -70°F (-56°C) to +250°F (121°C).

**Chemical Resistant:** ND Patch will not dry, shrink, or lose resiliency when exposed to commercial solvents, alcohol, gasoline, oil, caustic soda, jet fuel, etc.

**Reusable:** Fasteners coated with ND Patch can be reused repeatedly without damage to threads. ND Patch is particularly resistant to deformation, which makes it ideal for repeated

*Note: Minimum Order Quantities Apply.*

# Thread Coating

## ND LM-1293®

ND LM-1293 is an automotive approved process in which fasteners are accurately coated with one of a variety of thread masking and lubricating materials. The use of a Teflon® type material and a proprietary binder system in ND LM1293 makes it the ideal coating for many applications.

### Description:

- ND LM-1293 can be applied to male or female, ferrous or non-ferrous threaded fasteners of virtually any finish. It is a cross-linked coating providing excellent solvent resistance, high temperature resistance, e-coat resistance (as specified under GM6076-M), resistance to weld spatter, and improvement to torque-tension properties.
- ND LM-1293 lubricates fastener threads to reduce driving friction, heat buildup, and thread galling in long rundowns while helping to ensure uniform clamp loading.
- To meet your specific application needs, ND LM-1293 employs a wide range of polymers, including fluorinated ethylene polymer (Teflon®-type) material.

### Features:

**Reliable Masking:** ND LM-1293 prevents undesirable substances such as electro-deposited undercoating, weld spatter and some other materials from adhering to fastener threads.

**Low Heat Process:** Unlike competitive processes which often subject parts to extremely high temperatures that may damage or discolor the fastener, ND's unique patented process employs minimal heat.

**Minimal Pre-cleaning Requirements:** Unlike competitive processes that require parts be completely free of oil or other rust preventative coatings, only parts with excess oil or surface contaminants may require pre-cleaning for ND LM-1293 processing.

**Increases Productivity:** By providing additional lubricity, ND LM-1293 speeds assembly operations and increases productivity.

**Eliminates Capping and Plugging:** ND LM-1293 eliminates the need to cap male and plug female threads.

# Floating Clinch Nuts

## Series CFAS & CFAC

CFAS & CFAC floating clinch nuts provide a self-clinching fastener with a floating nut that compensates for mating misalignments to .030 inches (.8 mm).

Series	Material	Finish
CFAS	Heat-treated Carbon Steel	Zinc* Clear
CFAC	300 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).

Float: .015 in. (.4mm) minimum in all directions from center, .030 in. (.8mm) total.

STARBURST® design indicates genuine Captive self-clinching Floating Nut. Use in: Materials with Rockwell Hardness of B-70 or less.

# Floating Locking Clinch Nuts

## Series CFFS & CFFC

CFFS & CFFC floating clinch nuts provide a self-clinching fastener with a floating nut that compensates for mating misalignments to .030 inches (.8 mm) and provides prevailing torque for the mating screw equivalent to MIL-N-25027 specifications.

Series	Material		Finish	
	Body	Nut	Body	Nut

# Self-Clinching Nuts for Stainless Steel

## Series CFSP

CFSP self-clinching nuts provide strong load-bearing threads in stainless sheet metal as thin as .030 inches (.8mm).

Series	Material	Finish
CFSP	Precipitation Hardened Stainless Steel	Passivated ASTM A380

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).  
Use in: Materials with Rockwell Hardness of B-88 or less.

# Blind Press Nuts

## Series CFB & CFBS

CFB & CFBS blind, sealed-thread, press nuts are designed to provide extended thread lengths in thin sheet metal. Press nuts provide a seal against the entrance of dirt, oils, moisture, and corrosive atmospheres. They are usually more economical to use than nut and screw-type hardware that require elaborate seals and special assembly procedures.

Series	Material	Finish
CFB	Heat-treated Carbon Steel	Zinc* Clear
CFBS	300 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1  
(6H, ANSI/ASME B1.13M).

Use In: CFB – Materials with HRB-80 or less.  
CFBS – Materials with HRB-70 or less.

# Self-Clinching Nuts

## Series C & CS

C & CS nuts provide strong load-bearing threads in sheet metal and other thin section assemblies. Some C & CS nuts meet specification features of NASM45938/1.

Series	Material	Finish
C	Heat-treated Carbon Steel	Zinc* Clear
CS	300 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1  
(6H, ANSI/ASME B1.13M).

Use In: C – Materials with HRB-80 or less.  
CS – Materials with HRB-70 or less.

# Self-Clinching Nuts

## Series CFH & CFHN

CFH nut fasteners are available in both heat-treated and non-heat-treated versions, offering an opportunity to up-grade fastening quality with appreciable cost reduction over weld nuts.

Series	Material	Finish
CFH-X	Heat-treated	None
CFH-ZI	Carbon Steel	Zinc* Clear
CFHN-X	Non-Heat-treated	None
CFHN-ZI	Carbon Steel	Zinc* Clear

\*See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).  
 Use in: CFH-materials with Rockwell Hardness of B-80 or less.  
 CFHN -materials with Rockwell Hardness of B-60 or less.

Part Number Structure:

# Self-Clinching Nuts

## Series CKN

CKN self-clinching KAL-nuts provide strong internal threads in sheet material as thin as 1 mm.

Series	Material	Finish
CKN	Heat-treated Carbon Steel	Zinc* Clear

\*See Finish Spec. on Page 6.

Thread: Internal 6H, ANSI/ASME B1.13.

Use in: CKN – Materials with Rockwell Hardness of HRB-80 or less.

# Self-Clinching Flush Nuts

## Series CFL

CFL flush nuts offer the advantage of being completely flush within the sheet while providing load-bearing threads in materials too ductile to tap. All dimensions are identical to industry standards.

Series	Material	Finish
CFL	300 Series Stainless Steel	Passivated ASTM A380

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M)  
 Use in: Materials with Rockwell Hardness of B-70 or less.

# Self-Clinching Fasteners

## Series CFE & CFEO

### Self-Locking Threads

### CFEX & CFEOX

### Non-Locking Threads

CFE self-clinching fasteners are designed to provide strong threads in a minimum of space. They are available with locking and non-locking threads and are directly interchangeable with industry standards.

Series	Finish	Thread
CFE, CFEO	Black dry-film lubricant per MIL-46010 Type I over Cadmium	Self-Locking Internal 3B, ANSI B1.1 (6H, ANSI/ASME B1.13M)
CFEX, CFEOX	Passivated ASTM A380	Non-Locking Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M)

Material: 300 Series Stainless Steel.

Use in: Materials with Rockwell Hardness of B-70 or less.

Note: Thread locking performance for CFE & CFEO is equivalent to applicable NASM25027 specifications.

# Self-Clinching Self-Locking Nuts

## Series CRT, CRTS, CRTA

CRT series fasteners provide a low-installed-cost solution where a clinching fastener with repeat locking torque is required. The design allows for greater reusability and minimizes the possibility of thread damage of the mating screw.

Series	Material	Finish
CRT	Carbon Steel	Black Dry film Lubricant over Zinc Phosphate
CRTS	300 Series Stainless Steel	Black Dry film Lubricant
CRTA	7075-T6 Aluminum	None

Thread: Internal 3B, ANSI B1.1 (6H ANSI/ASME B1.13M).

Use in: Cold-rolled Steel.

Part Number Structure:  
CRTS 440-1ML

Note: Thread locking performance for CRT & CRTS is equivalent to applicable NASM25027 specifications.

# Self-Clinching Top Collar Lock Nuts

## Series CPL & CPLC

CPL top collar lock nuts combine reliable self-clinching mounting with a reusable non-metallic thread locking element.

Series	Material	Finish	Locking Element
CPL	Heat-treated Carbon Steel	Zinc* Clear	Clear Nylon
CPLC	300 Series Stainless Steel	Passivated ASTM A380	Clear Nylon

\*See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).

Use in: Material with Rockwell Hardness of B-70 or less.

### Note 1. Installation Tips

**Thin Sheets:** May be installed in panel thickness of .040 to .059 in. (1mm to 1.5mm) if fastener is partially installed in sheet. The knurled collar must be raised above sheet by the difference in thickness from .059 in. (1.5mm).

**Thick Sheets:** If fastener is installed in sheet greater than .070 in. (1.7mm), knurled collar may crack if mating screw is tightened above maximum torque limit.

**Note 2.** Thread locking performance for CPL & CPLC is equivalent to applicable NASM25027 specifications.

# Self-Clinching Studs

## Series CH, CHS & CHA

CH studs provide a strong flush-head assembly in material as thin as .040 in. (1.0 mm) with high torque-out and pushout performance.

Part Number Structure:

Series	Material	Finish
CH	Heat-treated Carbon Steel	Zinc* Clear
CHS	300 Series Stainless Steel	Passivated ASTM A380
CHA	2024-T4 Aluminum	None

\*See Finish Spec. on Page 6.

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M).\*\*

Use in: CH- Materials with HRB-80 or less.  
 CHS- Materials with HRB-70 or less.  
 CHA- Materials with HRB-50 or less.

\*\*See Note 3 on Page 6 for Gauging Spec.

### TOOLING

#### Note 1.

For material thickness of .059 in. or less, a countersunk hole is needed in the anvil.

Tooling for sheet thickness .059 in. (1.51mm) and less with #2 (M2.5) thru #10 (M5) thread sizes and less than .093 in. (2.3mm) for 1/4 in. (M6) threads.

#### Note 2.

For material thickness of .060 in. or more, a through-hole is needed in the anvil.

Tooling for sheet thickness .060 in. (1.51mm) minimum and greater with #2 (M2.5) thru #10 (M5) thread sizes and .092 in. (2.3mm) minimum and greater for 1/4 in. (M6) and 5/16 in. (M8) threads.

# Self-Clinching Studs

## Series HCH, HCBS & HCHB (High-Torque)

HCH high-torque studs offer advantages over weld studs and other fasteners. The heavy head configuration provides greater torque-out and improved pull-through resistance.

Phosphor Bronze studs provide excellent electrical conductivity and mechanical attachment in copper. The head of the stud will remain above the surface when properly installed.

HCH 1024-8

Part Number Structure:

- Length Code
- Thread Code
- Series

Series	Material	Finish
HCH	Heat-treated Medium Carbon Steel	Zinc* Clear
HCBS	300 Series Stainless Steel	Passivated ASTM A380
HCHB	Phosphor Bronze CDA-510	None

\*See Finish Spec. on Page 6.

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M). \*\*

Use in: Cold-rolled Steel or 5052-H34 Aluminum with Rockwell Hardness as follows:

HCH- Materials with HRB-85 or less.

HCBS- Materials with HRB-70 or less.

HCHB- Materials with HRB-55 or less.

\*\*See Note 3 on Page 6 for Gauging Spec.

### CAPTIVE® Dog-Point Studs

CAPTIVE studs are available with a dog-point end to assist the attachment of mating nuts, which is especially useful in high-speed production assembly, using motorized nut drivers. Dog-points may be specified on most CH, TCH, HCH, CHTS, and HCW style studs as a special order, using the following Part Number Structure:

Example: HCW 1032-8 DP

INCH (in.)	D ±.005	P ±.010	METRIC (mm)	D ±.13	P ±.25
6-32	.086	.050	M3.5 x 0.6	2.4	1.27

# Self-Clinching Studs

## Series TCH & TCHS

### Non-Flush Studs

TCH non-flush studs are manufactured for use in sheets as thin as .020 inches (.5 mm) thick. The pushout and torque-out values are excellent for most applications. The head of the stud will project above the panel surface when installed properly. Do not over squeeze!

TCH 440-4

Part Number Structure:

- Length Code
- Thread Code
- Series

Series	Material	Finish
TCH	Heat-treated Carbon Steel	Zinc* Clear
TCHS	300 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M).\*\*

Use in: Cold-rolled Steel or 5052-H34 Aluminum with Rockwell Hardness as follows:

TCH - Materials with HRB 80 or less.

TCHS - Materials with HRB 70 or less.

\*\*See Note 3 on Page 6 for Gauging Spec.

# Close Edge Studs

## Series CHE & CHES

CHE studs allow installation closer to material edge than standard studs without distortion of sheet edge. Provides flush-head assembly in material thickness of .040 in. (1 mm) or more.

Series	Material	Finish
CHE	Heat-treated Carbon Steel	Zinc* Clear
CHES	300 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M).\*\*

Use in: CHE – Materials with HRB-80 or less.  
CHES – Materials with HRB-70 or less.

Part Number Structure:

CHE 256 -4

\*\*See Note 3 on Page 6 for Gauging Spec.

# Close Edge Studs

## Series CHE & CHES

Continued from previous page.

### Installation Procedure

- 1) Prepare the correct size hole in the base material by punching or drilling. Do not deburr hole.
- 2) Place the stud through the hole in the base material and insert into the support anvil.
- 3) Apply sufficient squeezing force with a shop press until the head of the fastener is flush with the sheet material.

# Studs For Stainless Steel Sheets

## Series CHTS

CHTS studs are made of heat treated stainless steel providing a strong, flush-head assembly in stainless steel material as thin as .040 in. (1 mm) with high torque-out and pushout performance.

Series	Material	Finish
CHTS	400 Series Stainless Steel	Passivated ASTM A380

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M).  
Use in: CHTS - Materials with HRB-92 or less.

# Studs For Stainless Steel Sheets

## Series CHTS

Continued from previous page.

### Installation Procedure

Drill or punch the proper size hole in the parent material and apply the recommended force, with a standard shop press, to fully seat the fastener. For best results, a flat punch with a minimum hardness of Rockwell C55 should be used along with a special anvil that has a raised ring. This will assure full displacement of the stainless sheet material into the clinch ring of the stud.

Be sure to monitor the height of the ring on the anvil periodically and replace anvil when ring height wears down to .005 in. (.13 mm) to assure desired performance.

# Self-Clinching Concealed-Head Studs

## Series CFA & CFC

### Typical Installation Method

Continued from previous page.

#### Installation Procedure

1. Mill a blind hole in material to specified depth.\*
2. Place fastener into hole in anvil.
3. Place sheet material over head of fastener.
4. Apply a downward squeezing force with punch, pressing on sheet material until serrated collar of fastener is flush with surface.

\*Depth of blind holes may be greater than minimum, if sheet thickness allows.

#### Anvil 'D' Diameter Dimensions for Concealed Head Studs

# Self-Clinching Pins

## Series CH, CHN, CHS & CHA

CH pins provide a strong flush-head assembly in material as thin as .040 inches (1 mm) with high pushout performance.

Part Number Structure:

Series	Material	Finish
CH	Carbon Steel, Heat-treated	Zinc* Clear
CHN	Carbon Steel, Non-Heat-treated	Zinc* Clear
CHS	300 Series Stainless Steel	Passivated ASTM A380
CHA	2024-T4 Aluminum	None

\*See Finish Spec. on Page 6.

Use in: CH – Materials with HRB-80 or less.

CHN – Materials with HRB-50 or less.

CHS – Materials with HRB-70 or less.

CHA – Materials with HRB-50 or less.

# Self-Clinching Pins

## Series CGS

### (Tapered Guide Pins)

CGS Tapered Guide Pins provide a strong flush-head assembly in materials as thin as .040 in. (1mm) with high pushout resistance. A tapered end allows ease of locating mating hole in a variety of alignment and pivot applications.

Series	Material	Finish
CGS	300 Series Stainless Steel	Passivated ASTM A380

Use in: Materials with Rockwell Hardness of B-70 or less.

Part Number Structure:

CGS-125-8

# Broaching-Type Fasteners

## Series CKF2 & CKFS2

CKF2 and CKFS2 broaching-type fasteners are designed for use on printed circuit boards and on most brittle or hard materials; such as, glass laminates, epoxy or resin with paper, nylon, or canvas bases. They are also used on materials too thin or unsuitable for threading, such as acrylic and polycarbonate panels.

Since the aforementioned materials do not flow under pressure, these fasteners are designed with a knurled shank that can be pressed into a drilled hole. The shank grips the board with an interference fit by broaching its way into the panel as it is squeezed into the holes.

Series	Material	Finish
CKF2	Carbon Steel	Electro tin plating (Zinc* optional)
CKFS2	300 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).

Use in: Materials with Rockwell Hardness of B-60 or less.

### Dimensions & Specifications

Thread Size	Part Number		A	B	C	+ .003 - .000	Min.	Min.	
	Carbon Steel	Stainless Steel	± .003	± .005	± .005

	M5 x 0.8	CKF2M5	CKFS2M5	7.37	9.53	3.0	6.9	7.1	1.5

Note: CKF2 & CKFS2 broaching fasteners are designed for unplated through-holes. When installed in plated through-holes, a hole tolerance of +.005 - .001 in. (+.13 - .03 mm) should be used.

When used in plated through-holes, performance will be reduced and plating may be damaged by knurl.

# Broaching-Type Standoffs

## Series CKFE & CKFSE

CKFE and CKFSE threaded and non-threaded standoffs allow screws to be inserted through multiple layered boards for stacked assemblies. All fasteners from Captive Fastener are identical to industry standards so that they can be fed through standard automatic insertion equipment.

† Not stocked, available on special order. Note: Min Panel Thickness .060 in. (1.5mm)

Series	Material	Finish
CKFE	Carbon Steel	Electro Tin Plating ASTM B545 Class B (Zinc* Clear Optional)
CKFSE	300 Series Stainless Steel	Passivated ASTM A380

\* See Finish Spec. on Page 6.

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).

Use in: CKFE - Materials with Rockwell Hardness of B-60 or less.

CKFSE - Materials with Rockwell Hardness of B-70 or less.

Part Number Structure:

CKFE 440-4

Note: CKFE & CKFSE broaching standoffs are designed for unplated through-holes. When installed in plated through-holes, a hole tolerance of  $+0.005 - .001$  in. ( $+0.13 - .03$  mm) should be used.

When used in plated through-holes performance will be reduced and plating may be damaged by knurl.

# Reel Mounted Spacers and Nuts

## Series CRM

CRM Reel Mount nuts and spacers provide a low-installed-cost solution for surface mount hardware. The fasteners are fed from the recyclable reel using “pick and place” equipment and oriented prior to the reflow soldering operation.

Series	Material	Finish
CRM	Carbon Steel	Electro Tin Plated, ASTM B545, Class A w/ Preservative Coating

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).

Part Number Structure:

CRM- 440 - 4

# Spring-Top Standoffs

## Series CFKSSB

CFKSSB spring-top standoffs are designed for permanent installation into PC boards by pressing into a drilled or punched hole. The spring-action post provides quick attachment and removal of PC boards, with a simple snap eliminating the problems associated with loose hardware.

Series	Material	Finish
CFKSSB	CDA-360 Brass	None

Use in: PC Boards with Rockwell Hardness B-65 or less.

Part Number Structure:

CFKSSB 156-8

# PC Board Panel Fasteners

## Series CPFK

CPFK PC board panel fasteners provide permanent attachment of screw assemblies to PC board substrate material. Screw assemblies remain captive for easy mounting and removal of board.

Series	Material	Finish
CPFK	300 Series Stainless Steel	Passivated ASTM A380

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M).\*  
Use in: PC Boards with Rockwell Hardness of B-70 or less.

\*See Note 3 on Page 6 for Gauging Spec.

# Low-Profile Panel Fastener

## Series LPH

LPH panel fasteners are preassembled for attachment to removable sheet metal panels. Screw assemblies remain captive for servicing ease and provide low profile when secure. Slotted head with deep skirt allows tool or finger operation.

Series	Material	Finish*
LPH	Carbon Steel	Bright Nickel over Copper Flash

\*Black Nitride (BN) finish available

Thread: External 2A, ANSI B1.1 (6g ANSI/ASME B1.13M).\*\*

Use in: Materials with Rockwell Hardness of B-60 or less.

Part Number Structure:

LPH-0 440-30

\*\*See Note 3 on Page 6 for Gauging Spec.

# Self-Clinching Standoffs

## Series CFBSO, CFBSOS, CFBSOA (Blind Threads)

CFBSO self-clinching standoffs are designed for quick, easy installation with any standard pneumatic, hydraulic or mechanical press. Blind standoffs are used in metal panels with thickness of .040 in. (1.0 mm) and up. No secondary operation, such as reaming or deburring, is necessary prior to installation.

Series	Material	Finish
CFBSO	Heat-treated Carbon Steel	Zinc* Clear
CFBSOS	300 Series Stainless Steel	Passivated ASTM A380
CFBSOA	7075-T6 Aluminum	None

\*See Finish Spec. on Page 6.

Thread: Inernal 2B ANSI B1.1 (6H, ANSI/ASME B1.13M).

Use in: CFBSO for materials with Rockwell Hardness of B-80 or less.

CFBSOS for materials with Rockwell Hardness of B-70 or less.

CFBSOA for materials with Rockwell Hardness of B-50 or less.

Part Number Structure:

CFBSOS 6440-10

#### RECOMMENDED INSTALLATION PROCEDURE

1. Insert Standoff through hole in sheet into anvil.
2. Apply only sufficient squeezing force between parallel surfaces of punch and anvil to embed hex head flush in sheet. Avoid excessive pressures.

# Self-Grounding Standoffs

## Series CFSOSG & CFSOAG

CFSOSG & CFSOAG self-grounding standoffs are designed to be installed in steel and aluminum chassis to ground PC boards. Projecting teeth assure excellent electrical contact with PC board circuit and eliminate need for serrated or star washers.

† Not stocked, available on special order.

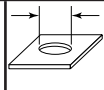

Series	Material	Finish
CFSOSG	300 Series Stainless Steel	Passivated ASTM A380
CFSOAG	7075-T6 Aluminum	None

Thread: Internal 2B ANSI B1.1 (6H, ANSI/ASME B1.13M).

Use in: CFSOSG for materials with Rockwell Hardness of B-70 or less.

CFSOAG for materials with Rockwell Hardness of B-50 or less.

# Male Self-Clinching Standoffs

## Series CFMS

CFMS Standoffs provide a permanently captivated fastener with a reusable threaded post to mount PC boards and other components in electronic displays. The unique part is available in heat-treated and zinc plated steel or passivated stainless steel and can be installed into metal sheets as thin as .050 in (1.27 mm) thick.

Series	Material	Finish
CFMS	Heat-treated Carbon Steel	Zinc Clear per ASTM B633
CFMSS	300 Series Stainless Steel	Passivated ASTM A380

Thread: External 2A, ANSI B1.1 (6g, ANSI/ASME B1.13M).\*

Use in: CFMS for materials with HRB-80 or less.

CFMSS for materials with HRB-70 or less.

Part Number Structure:

CFMS 632 - 6

\*See Note 3 on Page 6 for Gauging Spec.

# Unthreaded Thru-Hole Standoffs

## Series CFSO, CFSOS & CFSOA

CFSO self-clinching standoffs are designed for quick, simple installation with any standard press into a drilled or punched hole, and become permanently attached to the thin sheet metal material. They are primarily used to provide spacing of multi-panel assemblies. The unthreaded hole allows threaded studs to pass directly through the spacer to lower areas.

Series	Material	Finish
CFSO	Heat-treated Carbon Steel	Zinc* Clear
CFSOS	300 Series Stainless Steel	Passivated ASTM A380
CFSOA	7075-T6 Aluminum	None

\*See Finish Spec. on Page 6.

Use in: CFSO for materials with Rockwell Hardness of B-80 or less.

CFSOS for materials with Rockwell Hardness of B-70 or less.

CFSOA for materials with Rockwell Hardness of B-50 or less.

Part Number Structure:

CFSO 4116-4

All Measurements In Inches.

# Standoffs For Thin Sheet Material

## Series CFT, CFTS & CFTA

Continued from previous page.

CFT standoffs allow flush-head installation in a material thickness of .025 in. (.63mm) or more.

Full Thread Version

Partial Thread Version

Blind Thread Version

Series	Material	Finish
CFT	Non-Heat-treated Carbon Steel	Zinc* Clear
CFTS	300 Series Stainless Steel	Passivated ASTM A380
CFTA	7075-T6 Aluminum	None

\*See Finish Spec. on Page 6.

Thread: Internal 6H, ANSI/ASME B1.13M.

Use In: CFT – Materials with HR of B-60 or less.

CFTS – Materials with HR of B-70 or less.

CFTA – Materials with HR of B-50 or less.

Part Number Structure:

CFT M2.5-200

# Standoffs For Thin Sheet Material

## Series CFT, CFTS, CFTA

Continued from previous page.

### Installation & Performance Data

A Dim.	Series	Sheet Material											
		.025 in. (.64mm) 5052-H-34 Aluminium					.025 in. (.64mm) Cold-rolled Steel						
		Installation		Pushout		Torque-out	Installation		Pushout		Torque-out		
lbs.	kN	lbs.	N	in.-lbs.	N•m	lbs.	kN	lbs.	N	in.-lbs.	N•m		
.165 in. (4.19mm)	CFT CFTS CFTA	1500	6.7	68	302	5	.56	2000	8.9	98	435	8	.90
		-	-	-	-	-	-	-	-	-	-	-	-
.212 in. (5.38 mm)	CFT CFTS CFTA	1800	8	88	391	10	1.13	2500	11.1	148	658	14	1.6
		-	-	-	-	-	-	-	-	-	-	-	-

The installation and performance data listed are nominal when all specifications are adhered to. Changes in sheet hardness and mounting hole tolerance will affect performance. Therefore, we recommend testing the product in your application to determine actual results. Samples are available upon request.

### Installation

1. Prepare the required size hole in the base material by punching or drilling. Do not deburr hole.
2. Place standoff through hole in material and into installation anvil and squeeze into place using a shop press with flat punch.
3. Apply a sufficient force to seat the hex head flush into the base material.
4. Use chamfered anvil shown for sheet thickness of .025 to .032 in. (.63 to .81 mm) for sheets over .032 (.81 mm) The special anvil is not required.

Standoff A Dimension	Anvil Dimensions			
	Y		X

.212 in./5.38mm	.213 - .216	5.41 - 5.49	.250 - .257	6.35 - 6.53

# Spring-Top Standoffs

## Series CFSSA, CFSSS & CFSSC

CFSSA, CFSSS & CFSSC spring-top standoffs are designed for permanent installation into sheet metal by pressing into a prepared hole. The spring-action post provides quick attachment and removal with a simple snap eliminating the problems associated with loose hardware.

Series	Material	Finish
CFSSA	7075-T6 Aluminum	Plain
CFSSS	Carbon Steel	Zinc* Clear
CFSSC	400 Series Stainless Steel	Passivated ASTM A380

\*See Finish Spec. on Page 6.

Use in: CFSSA – Cold-rolled Steel HRB-50 or less.  
 CFSSS – Cold-rolled Steel HRB-60 or less.  
 CFSSC – Cold-rolled Steel HRB-70 or less.

# Self-Clinching Concealed-Head Standoffs

## Series CFHS

CFHS concealed head standoffs allow permanent mounting in thin metal sheets, using a hollow punch and solid anvil. The standoff is pressed permanently into a blind milled hole, with no marring of the exterior surface.

Series	Material	Finish
CFHS	300 Series Stainless Steel	Passivated ASTM A380

Thread: Internal 2B, ANSI B1.1 (6H ANSI/ASME B1.13M)  
Use in: Materials with HRB-70 or less.

Part Number Structure:

CFHS-1-440-4

# Self-Clinching Concealed-Head Standoffs

## Series CFHS

### Typical Installation Method

Continued from previous page.

#### Installation Procedure

1. Mill a blind hole in material to specified depth.
2. Place fastener into hole in anvil.
3. Place sheet material over head of fastener.
4. Apply a downward squeezing force with punch, pressing on sheet material until serrated collar of fastener is flush with surface.

\*Depth of blind holes may be greater than minimum, if sheet thickness allows.

# Weld Nuts

## Series CFWN & CFWNS

CFWN weld nuts are the solution to providing load bearing threads in sheets that are too thin to tap. They provide three-point projections for fast, easy welding. Captive Fastener weld nuts self align into standard hole sizes, and are dimensionally identical to industry standards. The alignment collar orients the weld nut and prevents weld spatter from entering thread area.

Series	Material	Finish
CFWN	Carbon Steel	Light Oil Coat (Copper Flash Optional)
CFWNS	300 Series Stainless Steel	Passivated ASTM A380

Thread: Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M).

### TECHNIQUES FOR BETTER WELDING

Be sure the electrodes, sheet material and weld nuts themselves are clean and contain no grease, rust or burrs. If installed welds look good, but pushout performance is poor, check for the following causes:

- Σ Electrode force too high
- Σ Low current level
- Σ Dirty panel
- Σ Nuts not centered
- Σ Hold time too short, causing insufficient cooling
- Σ Inconsistent pressure regulator

If threads are distorted after installation, check for the following causes:

- Σ Long weld time
- Σ High current level
- Σ Electrode force too high

### INSTALLATION TIPS

Electrode force is the pressure applied by electrodes on the weld nut and sheet material to squeeze them together and make good contact.

Low electrode force may cause discoloration, flashing, burning or spatter.

High electrode force may compress weld projections before correct temperature is achieved or push projections of the unheated weld nut into the sheet.

Secondary current setting controls the heat applied to the Captive weld nut and sheet material.

# Flush-Mounted Panel Screw Components

## Series CFS2, CFR2 & CFN2

CFS2, CFR2 & CFN2 Panel Screw Components remain captive to panel and frame when unassembled. Panel Screws are designed to be flush in sheets as thin as .125 in. (3.2 mm.)

Series	Material	Finish
CFS2	300 Series Stainless Steel	Passivated ASTM A380
CFR2	300 Series Stainless Steel	Passivated ASTM A380
CFN2	Heat-treated Carbon Steel	Zinc* Clear

\*See Finish Spec. on Page 6.

Threads:

CFS2 - External 2A, ANSI B1.1 (6g, ANSI/ASME B1.13M)

CFR2 - Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M)

CFN2 - Internal 2B, ANSI B1.1 (6H, ANSI/ASME B1.13M)

Use in: materials of HRB 70 or less.

### Dimensions & Specifications

INCH (in.)	Y	X	Z	H	K	D
	Min.	Nom.	± .010			Nom.
	.04	.125	.40	.16	.28	.13

### Dimensions & Specifications

METRIC (mm)	Y	X	Z	H	K	D
	Min.	Nom.	± .25			Nom.
	1.0	3.18	10.3	3.8	7.2	3.3

### Alternate Attachment Method:

When thin panel material makes it necessary for the screw head to remain above the top panel surface, CFS2 Screws may be used with CFL Flush Nuts as retainers. CFL nuts self-clinch into sheets as thin as .060 in. (1.5 mm) and remain flush on both sides of the panel. CFS2 Screws are rotated through the threads of the CFL Retainers to install and captivate. Refer to CFL section for dimensions and installation data.

# Self-Clinching Plungers

## Series CPN & CPR

CPN & CPR Spring-Loaded Plunger Assemblies are used as positioning pins and locking stops on drawer slides and equipment consoles. CPR series has a hold open feature activated by pulling out the plunger head and rotating it, which allows smooth slide operation.

Series	Material	Finish	Feature
CPN	Carbon Steel	Bright Nickel over Copper Flash ASTM B689	Spring Return
CPR			Hold Open

(CPR Version Shown)

Use in: Cold-rolled Steel or 5052-H34 Aluminum with Rockwell Hardness of HRB-80 or less.

Part Number Structure:

CPN - 04 - 4

	CPR				

# Recommended Installation Procedure

To achieve the correct installation results for **Captive** self-clinching fasteners, please follow the 11 simple rules listed below:

## DO:

1. Provide the properly sized mounting hole for each fastener.
2. Place fastener in hole on punched side of panel.
3. Be sure the fastener shank or pilot is squarely within the hole before pressure is applied.
4. Apply a steady squeezing force between press and anvil.
5. Use sufficient force to embed the clinching ring around its entire circumference.

## DO NOT:

6. Do not install steel and stainless fasteners in aluminum before the panels have been anodized.
7. Do not deburr mounting holes, as the rough metal is used to help clinch the fastener into the sheet.
8. Do not install the fastener closer to the edge of the sheet than specified in the dimension table for the fastener in use.
9. Do not over squeeze, as this may flatten the fastener head, distort the thread and buckle the panel.
10. Do not install fastener with a hammer blow; doing so does not allow sufficient time for the sheet metal to flow into the clinching profile. A squeezing force is required for optimum performance.
11. Do not install the screw in the head side of the fastener, but from the opposite side, which directs the load toward the sheet.

## NOTES:

1. All installation, pushout and torque-out force references are nominal, based on recommended installation specifications and procedures. Differences in mounting hole dimensions, sheet material and installation methods may alter this data. Testing the performance of this product in application is suggested. Samples are available for this purpose upon request.
2. Dimensional and performance characteristics are subject to change without notice.

# Galvanic Corrosion Chart

Galvanic Corrosion is a concern when selecting a fastener to be used in a panel of dissimilar metal, especially when it will be subjected to moisture or water. Ideally, the fastener should be the more noble metal and the panel the less noble metal, to reduce the effects of corrosion. Generally, metals close to one another on the chart will not have a strong effect on one another. However, the further apart the materials are on the chart, the stronger the corrosion effect will be on the least noble metal. Therefore, since the fastener is the smaller element, it needs to be made of the more noble metal so it will not be attacked. The larger panel can be of the less noble metal, where corrosion will not affect the larger surface as readily.
